

**DURABED  
WIDE BODY**

The **DURABED Wide Body** as the name implies, is a version of our standard DURABED developed to address the need for bedding of individuals with large physiques and the obese. It is wider and longer than the standard and reinforced with a molded framework, as seen in the inset.

It is a fiberglass molded one-piece unit, devoid of seams or attached components, with a textured surface finish. It is free standing and if needed, can be bolted to the floor through the base of the legs.

End users considering the purchase of the DURABED for their rooms and dorms, should also consider adding a few **Wide Body** models to accommodate large persons.
