

DURASAFE "C"

The "C" version of the **DURASAFE** bed, is a bed designed to be used with a filler so that it can be installed to span the entire width of a room, between three walls. This not only makes it possible to utilize the entire space, but it also comes in handy when there are conduits or pipes running outside the wall, which will be covered by the bed.

As with the "RC" and "LC" models designed to be mounted against two walls in a corner, the "C" model is attached using adhesives so there are no exposed fasteners. It is also very easy to install.

These beds are designed so that a ligature cannot be used with them, they have rounded corners to reduce the risk of injury, a recessed front, two molded-in storage compartments, and a textured surface finish. They are available in any of our eight standard colors.

There are two lengths available, that, including the filler, will span from 75" to 83" in room width.

Model	Length	Width	Height	Weight
DURASAFE "C" w/ filler	73 ¾" & 76" + 8"	31"	16"	115 lbs.
