

DURABENCH

MODULAR BENCH

The **DURABENCH** is a one piece molded fiberglass modular bench, designed to be secured to a wall and the floor. For this purpose, it has a flange along its top and bottom edges, that come pre-drilled to accept the fasteners.

The ends are vertical to the floor enabling the installation in the corner of a room as well as next to other bench to span a larger area.

The bench is four feet long, it has a contoured top for added comfort, a textured surface and three recessed steel bars that can be used to anchor restraints. There is an optional eye bolt for ankle restraints (see inset).
